Bluetooth Messaging

Using your iPad, iPhone, iPod or Android phone or tablet, you can pair with your device and send/receive messages. You will need to download the 'Yellowbrick Messenger' app from your device's App Store, and then follow these instructions:

Setup your user/pass

- Login to the Back-Office
- Go to your account's Contact Book
- Either create a new contact, or edit an existing contact

At the bottom of the page you will see 'Bluetooth Options'.

- You will need to add a 4-character 'Login' which will become your username for the app, and a 4-character 'Secret' which will be your password for the app.
- Also choose a 'Keyword' which will become your Bluetooth app e-mail address. e.g. nick.farrell @my.yb.tl

Pair your device with your tablet/phone

You will need to go into the Settings menu on your tablet/phone, and pair with your device over Bluetooth. Instructions vary depending on the device, but on Apple devices:

- Go to Settings / Bluetooth
- Locate the device in the list - YELLOWBRICK-XXXX
- Press it, to pair with it

Setup the App

- Open the app
- Go to the Settings menu
- Enter the 4-character user/pass codes defined earlier

You are now ready to send and receive messages.

Note - keeping Bluetooth on will significantly shorten the battery life of your device. You can turn Bluetooth off whilst not using it if you wish.
